The effect pedals that a guitarist connects between his guitar and amp are a type of insert effect. When you record, it is convenient to use the builtin rhythm guide. Effective use of these allows you to add greater breadth to the sound. If the button flashes in red, that track is ready for recording. Therefore, by making use of the many VTracks, you can use the BR864 just as if it were a 64track multitrack recorder. This allows a wide range of uses, such as recording one take of a guitar solo or vocal, and then recording another take without having to erase the first one. This may make it difficult for you to set the repeat portion exactly as you desire. If this is the case, you can use a separately sold footswitch BOSS FS5U, Roland DP2, etc. and use your feet to punch in and out. Recording automatically starts at the auto punchin location, so start playing what you want to record. These are grouped according to different input sources and each group is called a "bank.". If you exit the Edit Effect screen without saving the effect patch you changed, "TMP" appears next to the indication of the bank. Be aware that if you select a new effect patch while "TMP". However, sometimes you want to change the connection order. On the BR864, you can accommodate a wide variety of situations by changing the point to which the insert effects are connected. Follow the procedure below to change where insert effects are connected. This is called "bounce" also known as bounce recording or pingpong recording. Return to the Play screen. The REC TRACK button for the track selected as the recording destination flashes in red. If the selected recording destination track already has data recorded to it, the REC TRACK button for that selected recording destination track alternately lights up in orange and green.

FEDERAL COMMUNICATIONS COMMISSION RADIO FREQUENCY INTERFERENCE STATEMENT This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. The BR864 is the answer to my dreams. Its easy to use and my first CD was received favorably by the muscians I admire. I researched several units before deciding on the 864.

It has everything I need to make good recordings. Simplicity and potential. I could work with this unit for months to come and still not utilize the many capable variations. I had a problem achieving a desired function, early on. I called Boss. The tech worked very hard with me to remedy the problem. Yes, it was my fault. Ive had no further problems since. Im still amazed at the multitude of effects and options. Im convinced that its limitless. The 864 only has one XLR mic input. I wish it had one more. I can work with it, but sometimes Id like to have one more. Just never satisfied, are we. The BR864 is a pretty tough unit. Mine stays in the bedroom studio. I keep it on a piece of foam cutout to protect it from vibrations and movement. I also keep it covered when not in use. Not because the unit is intimidating, but, because I know I wont come out for hours, and when I do Ill have a warm glow about me. Weird, huh This is a fine unit and capable of so much. I would recommend it to anyone. The range of effects if outstanding, particularly on the guitar and vocal side of things. The list of features is vast and providing you can be bothered to invest the countless hours to learn how

to achieve the desired result it will do just about everything you can conceive of then it is an excellent buy. The first thing that annoys me is the construction. Yes it has to be lightweight, but I fear that I have to treat it with kidgloves as it does not seem to be very robust. It consequently lives in its box which I have simply modified with scissors to allow the lid the shut despite it being permanently connected to the relevant cables. I would personally have prefered to sacrifice some of the weight aspect for an aluminium case and paid more. The second point is by far the most daunting aspect. It is horrifically complicated to operate beyond the basic recording functionality. Having had it for nearly 8 months I am still struggling to assimilate the basic ways of doing things.

Although the manual is well written and has lots of diagrammatical help, there is something incredibly convoluted about the way the instructions are phrased and I am a systems analyst, not some uninitiated numpty with no clue. In fact I would go as far as to say it is beyond the reach of many of its purchasers and despite what other reviewers may write, I suspect few wish to lose face by admitting we are in rocket science territory. A 200 page instruction manual should tell you something about the product before you even turn the device on and that is there is a lot of stuff to learn. The builtin drum sounds are extremely weak also and lack any real kick I prefer the more laborious route of connecting my Yamaha pads and laying the percussion side down manually. As above, I find it lacking in the longevity department a more durable case would inspire more confidence. That said, it is of a reasonable quality and the rear panel offers a great many connectivity options. Too complicated FAR too complicated. Excellent audio quality. Excellent range of features, provided you can be bothered to assimilate all the modes and buttons and flashing lights. Yes you can take it out of the box and record within 10 minutes, but do anything else and be prepared to let your instrument gather some dust whilst you go back to school. The price is about right. I connected to the game port of my Phillips CD player. It sounded great. I was able to use one of the 40 patches for mic so my voice didnt sound too bad. The guitar patches were very satisfactory. You can plug your guitar into your effects pad and then use the onboard effects as well. nice. The manual was a little clunky. It would be nice if the memory card were 512 instead of 128. I am amazed at all the effects that are built in.I take theunit everywhere I want and can even run it for a long time on batteries. Because of its portability and easy of use it promotes what it is all about; your creativity making music.

The biggest shock is that you don't have software to convert the recordings on your PC, you have to convert your tracks on the unit itself to wav or aif format before you can export it to the PC. The conversion on the unit takes a lot off room on the Compact Memory card so the included 128 Compact Flash doesn't get you very far. It is super frustrating that after your recording you find out that you cant convert it because your Compact Flash card is full. It is strange because the BR8 and the BR532; which are older machines do have the software to convert on the PC. I contacted Roland; they have no plans providing the software. The internal microfone is also noit very good; using a good external microfone I use a Shure SM58 works very well and is recommended. Also; one can only plug one guitar in and one microphone; I would have liked extra inputs. The Boss Br8 64 feels pretty solid better than the Fostex. The knobs and functionality are similar from the ofther bigger Boss multitrack recorders so when you upgrade the learning curve you have with this unit transfers easilly. The lack of software conversion is a big minus; recommend to get the 1 GB Compact Flash.By using our services, you agree to our use of cookies. Find out more. Purity Transformed The only song I managed to export in its entirety was the demo song that came with the blasted thing. I understand its a pretty specific request, but if someone, ANYONE could help me Id be eternally grateful. Please, please, please, Im begging you!!!!You can select which tracks to bounce to, i.e. 12V1. The next step is mastering, which will take the bounced tracks to the final version. Hope this helps. Wouldnt it be nice if the owners manual pointed that out If it does, I cant find it anywhere in the manual. At any rate, thanks for clearing this up for me. I was baffled as to why the recorder will only play the mastered version of the song. Now Im no longer baffled, just bummed.
