With the look, People can instantly attracted to a certain digital camera product. More than that, sometimes the choice of camera look is also reflecting the personality of owner as well as the classiness of the camera itself. So, before we hit the Canon PowerShot SX50 HS Manual User Guide directly, now we are going to talk about the look of this camera first. Because of the Big Zoom capability, this camera's body is bulky, just like a DSLR camera. It's even chunkier because of the added lithiumion battery that is placed right at the handgrip spot. Although the handgrip is a bit shallow for a large plastic body, you can still hold it in comfort. The dimensions of Canon PowerShot SX50 HS are similar with the predecessor. From the looks, this improved camera looks subtly different. The grip is much deeper than before. The body is also less chunky and less muscular. With those changes on the body, it makes you get the hold to be more secured. Some people might not be pleased with the plasticky body. The rubberized grip would be better for this camera. And base on the Canon PowerShot SX50 HS manual, the construction is solid and robust which makes this camera is strong enough. The Specification of Canon PowerShot SX50 HS Canon still continues to give great camera features and designs to their collection. There was a time when every company

battled for the megapixels. They were competing to have the best megapixel they can. That kind of battle is not up anymore, they have the new aspect to battle for. It is the “zoom” aspect. They are competing to have the camera with the greatest zoom quality. The power of the camera lenses are being tested in this kind of battle. Canon has joined the competition by releasing SX series camera. The rival of this Canon PowerShot SX50 HS is the one from Nikon, it's the Coolpix P510 that has the super zoom capability of 42 times. This camera from Canon is the replacement of the previous camera, SX40.

There are bunch of features that this Canon PowerShot SX50 HS has to offer. Based on the Canon PowerShot SX50 HS manual, the huge optical zoom of 50x is the main attraction of this camera. The performance of the optical zoom is supported by the Intelligent IS stabilization system. This is the system that is originally made by Canon. That system is the result of combination between lensshift and digital stabilization. That combination would give you the stops of benefit up to 4.5 for exposure privilege. That's the huge amount of zoom you could get from this Canon PowerShot SX50 HS. Some of the disappointment of this camera is the issues with focusing that sometimes disturbing for some photographers. The quality of EVF is quite poor, which becomes big issue in this camera. You can get this camera on Amazon for 430 dollars. It was basically useless for my purposes. Do not waste your money. I has not a single image, sketch or doodle other than the front cover. It doest even have page numbers, let alone an index.

I am embarrassed for amazon that they associate themselves with this and Lucas Maththews should be ashamed. The SX50H camera is a great camera loaded with lots of features. The Canon Getting Started booklet which comes with the camera is available for free download from Canon, as is the User Guide. Something went wrong. Packaging should be the same as what is found in a retail store, unless the item is handmade or was packaged by the manufacturer in nonretail packaging, such as an unprinted box or plastic bag. Very hard to find your way to the page you are looking for because the book has to be fully opened to see the page numbers. The binding is too small for this many pages and would bind and tear when opening. Printing was good and clear and easy to read and

paper was of good quality. The book was reasonably priced but the cost of overseas shipping made it quite expensive. Cancel Thanks, well look into this. All Rights Reserved. That doesnt mean that camera manufacturers havent found something else to drive up to absurd levels. In the case of big zoom cameras that thing is, of course, how powerful the lens is. Remember a few years ago, when 12X lenses were considered a lot. Since then weve gone through 18X, then 24X, and 30X. Things really started to get crazy over the past year, with Nikon releasing their Coolpix P510, which has a 42X lens. There is a caveat that goes along with lenses this powerful, though. If youre shooting at ISO 80 for best image quality, youre going to need hands of stone or a tripod in order to get a sharp photo. What Im getting at here is that you may need to crank up the ISO sensitivity in order to get that sharp photo, unless youre using a tripod. They include a 12.1 Megapixel CMOS sensor, DIGIC 5 processor, rotating LCD display, manual controls, a hot shoe, and the handy Zoom Framing Assist feature that Ill explain later. The sleek, inward leaning lines make it look a lot more modern. Aside from the cosmetic differences, the only other real change here is the lens. The back views of the camera are quite similar, with the SX50 having a slightly larger LCD and a relocated movie recording button. It also loses the hot shoe cover that didnt serve much of a purpose on the SX40. First, the lens is slower, which will affect its performance in low light. In addition, rated battery life has dropped by nearly 20%. Canon has really managed to strip things down to a bare minimum, not even including a USB cable anymore. Heres what you will find in the box Youll first encounter CameraWindow, which will transfer photos from the camera onto your Mac or PC.

Im not sure what Canon used to build this software it feels like Adobe Air, but it definitely doesnt feel like a native application anymore, at least on the Mac side. That said, itll let you edit your photos in a number of ways, including autocorrect, red-eye removal, tone curve and level adjustment, and more. It also allows you to edit your videos, including adding transitions and special effects, and save the results as a new movie. Both stills and movies can be shared via email, Facebook, YouTube, or Canons own Image Gateway service. Here you can adjust exposure, highlight and shadow detail, the tone curve, noise reduction, and white balance. There are also tools for reducing lens distortion, vignetting, and purple fringing. If you want to use Photoshop to edit RAW files, youll need version 7.3 RC or newer of the Camera Raw plugin. This product can take photos that youve lined up manually in the case of the SX50, and combine them into a single panoramic image. Those days have passed, with manufacturers now putting the whole thing on a PDF file on an included CDROM. And users shouldnt have to do that, in this reviewers opinion. Instructions for using the bundled software will be installed onto your Mac or PC. Therefore, youll need to buy a memory card right away, unless you have one sitting around already. The PowerShot SX50 supports SD, SDHC, and SDXC cards, and Id recommend picking up a 4GB card if youll be mostly taking stills, and 8GB or 16GB if recording Full HD video is a priority. A high speed card Class 6 or higher is recommended for maximum

performance. The 320EX has an LED lamp that is useful for video recording, and it can also tilt and rotate for bouncing. The 430EX II has even more power. All three can be wireless slaves, though you'll need an even higher-end flash or the transmitter below to use them. Note that you can buy a generic USB cable for less than a dollar.

But sorry conversion lens fans, but 50X is the most that you're gonna get out of this camera! Is this the problem. Like 0 Oct 20, 2015 [permalink eaglebald62](#) my camera will not let me take photos. It clicks, ok, but the image is sheer darkness, what did I do wrong. It's been working perfect to date. Like 0 Oct 20, 2015 [permalink iCloud](#) I want to know how the image quality compares between the SX40 and the SX50. Thank you. I photograph wildlife and birds. I am not so much concerned about the ability to track and capture as the ability to capture with the best image quality. I do not need the extra zoom of the SX50 as I live in the woods and cannot see very far because of the trees. I want to know if the SX40 is better at capturing birds say taking off and landing due to having a significantly faster shutter speed by 40%. I want to know if one of them is better at capturing say two birds together like one behind the other because it has more depth of field in say sport or burst mode. I am confused by the stats that say the aperture is wider on the SX40 as some reviewers have said that they both are the same at 35X zoom. If you wanted to shoot at a particular ISO and shutter speed, then the SX40 could still do so in slightly darker conditions. If your subject is moving, however, a shorter shutter speed may be required, so then the SX40 may be the better choice. Image quality wise, there isn't much between the two if you compare them at the same ISO. Like 1 Jun 16, 2015 [permalink Clark7766](#) Canon and Nikon aren't the only ones in the game. I have a Panasonic Lumix FZ 47, discontinued, 12.1mp 24x optical, 25mm 700mm and a Panasonic Lumix FZ 70, 16.1mp, 60x optical, 20mm 1200mm, and if you go into digital mode you can double that to 120x or 2400mm without a lot of degradation which I have been very successful with on a tripod and doing moonshots. Then you can go even further than that up to 300x but anything above the 120x is junk.

I think I must have accidentally changed things. Can someone help. Like 0 Dec 18, 2014 [permalink BobFoster](#) Thanks for the most thorough review I've seen so far. I'm looking to upgrade from my SX10 and have to say I'm torn between this and the FZ200 wanting a thorough review of that one, which seems quite a revolution in a different direction. I suspect Canon has much the superior in camera jpeg. I would have liked a comment about the famously slippery and dodgy "control wheel" of the SXx predecessors and whether it's been worked on. Like 1 Dec 17, 2014 [permalink Berrin](#) I had Canon SX40 and I was happy in general for 2 years. Somehow I felt maybe better to update. I sold it. And I got Canon SX50.
